

Enabling Research at Speed and Scale for Maximal Impact

Avacare eases the administrative burden of clinical trials without compromising on quality

In today's rapidly evolving environment, operating a successful and efficient clinical trial is more difficult than ever before. From increasingly complex protocols and stringent staff training requirements to more complicated therapies and niche patient populations, the need for high-performing sites and an integrated operational infrastructure cannot be overstated.

With over 25 years of experience in clinical trial delivery, Avacare Clinical Research Network helps eliminate bottlenecks that slow study timelines. Our turnkey operational infrastructure can revolutionize your clinical research—cutting costs and expediting timelines, all while maintaining the highest quality standards.

The avacare difference

- **Save time and money:** Avacare's streamlined operational processes enable rapid study start-up from feasibility to RFP, while accelerating participant recruitment, site training, and study execution.
- **Strengthen quality and compliance:** Ensure subject safety and data integrity, including strict compliance with applicable regulations, industry standards, expectations from ethics committees and study protocols.
- **Alleviate costly risks:** Not only are Avacare systems firewalled to ensure data privacy, but we also proactively identify risks and challenges before a trial starts, as well as conduct routine, focused data reviews to detect potential issues throughout protocol execution. What's more, our quality management team will assure the highest level of quality is maintained as we operationalize each study.
- **Trusted support and resources:** From Investigators, Site Managers, and Clinical Research Coordinators, to teams devoted to data management, quality, and study start-up, Avacare offers a wealth of professional expertise to ensure you hit each trial milestone.

Unmatched expertise in clinical research

Avacare's comprehensive clinical research network provides solutions for patients across more than 20 therapeutic areas and nearly 50 locations. With a unique combination of both embedded and dedicated sites, we effectively manage trials ranging from those with complex protocols to high-volume vaccine studies.

At Avacare, we're committed to ensuring patients have a smooth, respectful, and efficient patient journey. With access to over 3.5 million diverse patients, our recruitment and retention team can easily identify the right patients for each protocol, while simultaneously helping sponsors meet regulatory commitments to diversity. Meanwhile, our compassionate investigators lead the study team to operationalize each study with expertise and professionalism—ensuring patient safety is the top priority every step of the way.

Driving efficiency and timeliness

Avacare helps reduce costs and move timelines forward without compromising on trial quality.

- **Centralized operations:** Expedite your study start-up and simplify operations through our centralized approach
- **In-house recruitment and staffing support:** Achieve enrollment targets faster with our technology-enabled recruitment and comprehensive study support
- **Efficient start-up processes:** First subject in occurs earlier
- **Reduced timelines:** Clinical trials close ahead of plan

Avacare provides a range of services for optimal clinical trial execution that delivers high quality data and rapid database lock. As your site management partner, we will simplify your trial operations through our integrated infrastructure, taking care of:

Site start-up, including IRB, budget, and contract approvals

Staff training and support

Patient recruitment and retention

Data collection and quality management

Revolutionize clinical research with avacare

At Avacare, our aim is to change clinical research for the better. Our integrated clinical research infrastructure is powered by technology and expertise to simplify recruitment, operations, monitoring, and compliance. By reducing the administrative burden associated with clinical trials, Avacare boosts efficiency from initial contact for feasibility to database lock, ensuring your research delivers for the market and patients alike.
